**AFRICAN
GLOBAL
ECONOMIC &
DEVELOPMENT
SUMMIT 2017**

March
16th
to
18th

**CLEAN ENERGY,
CLIMATE CHANGE,
& POVERTY REDUCTION**

This fourth annual event is focused on emerging trends for clean energy, climate change, and poverty reduction on the continent of Africa. Discover immediate investment opportunities for solar and renewable energy technologies which can be applied for both on and off grid enhancements to Africa's huge energy shortage. Learn about the impact of desertification the persistent degradation of dryland ecosystems which threatens the livelihoods of some of the poorest and most vulnerable populations in Africa and what options exist to avoid or reverse desertification and its negative impacts. Explore opportunities in key agriculture sectors such as crop production, irrigation, fertilizers, farm equipment, and food processing. Agricultural opportunities are also available in biodiesel (energy crop) production for the transportation industries, farm industries, and power generation industries. Other investment opportunities include gas gathering & production, oil refining, mining & minerals, cultural arts, housing, hospitality & tourism.

The AGED Summit is for business professionals, investors, alumni, and students who want to enhance their knowledge of key drivers moving Africa forward and to position themselves to take advantage of those emerging opportunities. The AGED Summit brings Africa to America's doorstep and provides the beginning blueprints of a plan towards economic growth for businesses and entrepreneurs looking for new ideas, partnerships, company expansion and investment opportunities.
